Avoiding the False Negative 2005 The purpose of this qualitative study was to examine the perceptions that students and advisors/administrators had regarding the mathematics placement process at a two-year branch campus of a large urban, mid-western university. Participants in the study were 20 advisors/administrators and 15 students. Qualitative data were collected from face-to-face, semi-structured interviews and focus groups, placement test observations, and placement test documents. The student participants were students who had taken the Compass/ESL® computer-adaptive math placement test and successfully completed a college level math course at the institution, as well as students who had just recently taken the test. The advisors/administrators all had some level of involvement in the mathematics placement process at the institution. Therefore, this research offered a unique opportunity to focus on the current mathematics placement process. The results suggested that students want and need an opportunity to practice before they take the test. This may encourage them to take the test more seriously. Furthermore, the use of an entrepreneurial placement testing system should require that the recommendations made by them as to the procedures for administering the test be followed. Finally, the institution is interested in implementing mandatory placement in mathematics. This would include a well-defined mathematics placement appeal process for students who believe they are not correctly placed by the test, as well as the use of multiple measures to determine the placement of students in a mathematics course.

Closing America's High-achievement Gap: A Wise Giver's Guide to Helping Our Most Talented Students Reach Their Full Potential Andy Smarick

2013-10-22 This intriguing book makes a powerful case for a sorely needed U.S. educational improvement that has been almost entirely overlooked. During the last two decades, philanthropists and education reformers have made urgent efforts to pull weak students up to levels of basic competency. Though that vital work is incomplete, there is evidence

of progress among low achievers. Meanwhile, though, children at the other end of the achievement spectrum have gotten lost in the shuffle. Programs and funding once aimed at stimulating high-potential students to make the most of their talents have withered, and we are now doing a poor job of stimulating our quick learners. When the particular needs of high-potential students are not met by schools, that is a moral failure—because every child deserves to be stretched and challenged. It is also a threat to our national interests—since high achievers will be crucial to America’s future ability to compete internationally. This is a field where donors have wide-open opportunities to lead. In the pages of this fresh, practical guidebook, savvy school-reform philanthropists will be introduced to scores of programs and institutions that can pull talented students of all ages, races, and income levels up to their full natural capabilities.
